Crazy for Cress
Grow cress and make a tasty egg and cress sandwich.

Cress is a member of the Brassicaceae family, as are radishes and beetroot. It is a reliable and quick crop to grow which makes it great for growing in school, youth club or at home.

This resource is a step-by-step guide to growing cress and making a tasty egg and cress sandwich.

Cress is a quick, easy and cost-effective plant to grow on a windowsill in class or at home. You can undertake a short experiment suitable for children aged 5–12 where they can test how to grow the best crop and learn about growing conditions. Using yogurt pots or egg boxes to grow it is a great way to start your gardening journey.

Cress growing experiment
Growing cress is always a fun thing to do. Not only do you get to experience growing plants, and quickly, but you can eat the results too! This experiment helps children understand what is needed to grow plants and the conditions where cress seeds grow best.

We know a plant needs the following things to grow successfully:
1. Sunlight
2. Soil
3. Space
4. The right temperature
5. Water

You will need:
- Cress seeds
- Soil
- Cotton wool
- Water
- Five small plant pots (egg boxes or yogurt pots will be fine)
- Labels so you remember which experiment is which when you gather them all together
- Various places to do your experiment; somewhere dark, cold and a sunny windowsill
| How to plant                                                                 | Instructions                                                                                                                                                                                                 | How do you predict the cress will grow? | How has the cress grown?

</tbody>
</table>

In 10–14 days, your experiment will be complete. Come together to assess your findings and what helped or hindered growth.
Share an egg and cress sandwich

(Serves one)

Organisation and skill: ★★★ (Easy)
Cost: ★★★ (Low cost)
Community involvement: children under supervision, young adults, families, older people
Equipment: ★★★ (Basic)

Ingredients
- 2 slices of bread or 1 bread roll – you could make some using this recipe [https://www.fflgettogethers.org/get-involved/resources/cooking/easy-read-bread-roll-recipe/](https://www.fflgettogethers.org/get-involved/resources/cooking/easy-read-bread-roll-recipe/)
- 2 organic or free-range eggs
- 2 tbsp mayonnaise or salad cream
- Home grown lettuce leaves or tomatoes
- Salt and pepper
- A knob of butter
- 1/3 crop of your cress

Consider using organic eggs, which means higher welfare for hens.
Method

1. Bring a pan of water to the boil and, using the slotted spoon, carefully lower the eggs into the water and cook for six minutes. Cool under running water, until cold enough to be peeled.

2. Peel the eggs, adding the shells to your compost bin and leave the eggs to cool completely.

3. When cold, mash with a fork, add the mayonnaise or salad cream and season to taste.

4. Place both slices of bread on a board and butter, gently spread the egg mix onto the first slice of bread then add lettuce or tomatoes and cress before placing the second buttered slice of bread.

5. Carefully cut your sandwich into triangles and enjoy!

Generate conversation and explore sensory experiences.

- Discuss the events you could host to share sandwiches together.
- Share your favourite sandwich combinations, who's is the most popular?
- Which cultures and countries do sandwiches come from? Discuss club sandwiches or the New York deli sandwich. What do other cultures eat instead of sandwiches for lunch?
